

MATTHEW O'BRIEN

Lewiston, ID | mjobrien1080@students.lcstate.edu

208.816.9293

Hardworking, quality oriented professional pursuing a Bachelor of Science in Computer Science. Leverages coursework in data structures, systems programming, Python, and SQL to drive manufacturing process improvements, collect and interpret production data, and support boards and components operations.

EDUCATION

BACHELOR OF COMPUTER SCIENCE, MINOR IN GEOLOGY AND EARTH SCIENCE

Lewis-Clark State College

Expected May 2026

- Recipient of Presidential Scholarship and Laura Moore Cunningham Scholarship
 - Relevant coursework: Python Coding/Programming & 3D CAD Modeling
 - GPA 3.6
-

EXPERIENCE

PROCESS ENGINEERING TECHNICIAN I

2025 – PRESENT

Schweitzer Engineering Laboratories | Lewiston, ID

- Supported Surface Mount Technology (SMT) manufacturing operations through inspection, programming, and production support to maintain quality and efficiency.
 - Collected and analyzed manufacturing data to identify defects, trends, and opportunities for process improvement.
 - Applied scripting and data tools to streamline troubleshooting and accelerate root-cause investigations.
 - Collaborated with cross-functional teams to reduce production disruptions and improve overall manufacturing performance.
-

SENIOR ASSEMBLER

2023 – 2025

Schweitzer Engineering Laboratories | Lewiston, ID

Led SMT line operations and quality initiatives by tuning AOI/SPI programs, performing audits and X-ray checks, mentoring operators, and implementing engineering-driven process improvements to reduce defects and protect downstream customers.

ASSEMBLER

2022 – 2023

Schweitzer Engineering Laboratories | Lewiston, ID

Executed day-to-day SMT assembly and inspection tasks, maintained production workflows and paste print/placement setups, and ensured quality product through strict adherence to process controls and inline verification.

SKILLS

- **Technical documentation** - Create clear setup guides, inspection criteria, and corrective-action records.
 - **Cross-functional coordination** - Align engineering, QA, and production to implement process changes and track outcomes.
 - **Python scripting** - Automate data extraction, reporting, and routine analysis to speed investigations.
 - **Data collection and analysis** - Use KSMART/Excel and SQL to gather, aggregate, and interpret production and inspection metrics.
 - **Automated vision systems** - Configure and tune AOI/SPI programs to reduce false calls and improve defect detection.
 - **Operator training and mentorship** - Deliver hands-on training for advanced SMT tasks and document best practices.
-
